TECHNICAL PROJECTS

Togetherwerise Fundraising Platform

Self-Directed Project | April 2026 – Present

- Developed a professional community fundraising web application utilizing the full MERN stack (MongoDB, Express, React, Node.js).
- Built a responsive user interface to ensure seamless navigation across both desktop and mobile devices.

Aura Bot WhatsApp Automation

Self-Directed Project | August 2025 – 2026 March

- Engineered and deployed an automated WhatsApp bot utilizing Node.js and the Baileys library.
- Programmed custom functionalities including auto-replies, group administration commands, and dynamic resource distribution.

Hardware Bottleneck Analyzer

Self-Directed Project | May 2026 – Present

- Built a decoupled, full-stack application that replaces static PC bottleneck calculators with dynamic machine learning.
- Trained and deployed a Random Forest Regressor via a Python REST API to predict gaming performance with over 95% accuracy.

PROFILE

Motivated IT student and full-stack developer with hands-on experience building scalable web applications and automated bots. Proficient in the MERN stack, database management, and implementing machine learning models. Seeking a software engineering internship to contribute to complex projects while expanding my technical skill set in a professional environment.

EDUCATION
